PRESS RELEASE

ALPINE: wins contract to build National Stadium in Warsaw.

Football stadium with 55,000 seats to be built by ALPINE for 285 million euros in a construction period of 24 months

Poland/Austria: ALPINE was recently named the best bidder for the National Stadium in Warsaw, one of the venues for the 2012 European Football Championships. The contract was officially awarded upon expiration of the obligatory period allowed for objections. "Construction of the National Stadium in Warsaw, to be one of the most modern stadiums in Europe, is an impressive addition to the list of stadiums ALPINE has built. We also landed the contracts for the Polish stadiums in Danzig and Posen," Dr. Peter Preindl, managing director of ALPINE Bau GmbH, proudly announces. The joint venture partners are ALPINE Bau GmbH, ALPINE Bau Deutschland AG, ALPINE Construction Polska and Hydrobudowa Polska. S.A., ALPINE Bau GmbH being in charge of the consortium's lead management.

The stadium

The National Stadium was designed by the international architects J.S.K., gmp and Schlaich Bergemann Partner. It will be built on the same site as the old stadium. The old stadium was scaled back far enough to make room for the new stadium inside. The new National Stadium will seat 55,000 spectators on two tiers and 10 levels. Over 60 exclusive VIP lounges will offer up to 900 seats. More than 800 seats will be available to journalists. A basement garage with 1,700 spaces will be located on the two lowest levels. Restaurants, a shopping zone, a fitness center and conference rooms, etc. are also planned.

The contract value is PLN 1,263 million, currently equivalent to approx. EUR 285 million. Construction should be completed in 24 months.

The carcass will be made of cast-in-place reinforced concrete with a height of up to 70 meters, combined with prefabricated reinforced concrete components for the tribunes and trusses. An impressive steel cable design was chosen for the roof, giving the stadium a particularly dramatic effect and making it possible to play in rain or snow.

Competence in stadium construction

ALPINE has extensive experience in executing large-scale stadium projects, gaining highest competence on an international scale in the construction of sports facilities.

Following the construction of the Allianz Arena in Munich, ALPINE recently completed the Dubai Cricket Stadium in the world's biggest sports center.

ALPINE was also responsible for the construction of the Wörthersee Stadium, the Tivoli Stadium and the enlargement of the Salzburg stadium in Wals-Siezenheim for the

EURO 2008. ALPINE also won the contract to build the stadiums in Danzig and Posen a few weeks ago.

*The **ALPINE** Group, a member of the FCC Group, is a global player. With a construction output of EUR 2.6 billion in 2007 and a staff of roughly 13,600, ALPINE is one of the three largest construction groups in Austria. More information: www.alpine.at*
